polymer composites are increasingly used in aerospace applications due to properties such as strength and durability compared to weight edited by two leading authorities in the field this book summarises key recent research on design manufacture and performance of composite components for aerospace structures part one reviews the design and manufacture of different types of composite component part two discusses aspects of performance such as stiffness strength fatigue impact and blast behaviour response to temperature and humidity as well as non destructive testing and monitoring techniques

in this definitive study j d hunley traces the program s development from goddard s early rockets and the german v 2 missile through the titan iva and the space shuttle with a focus on space launch vehicles since these rockets often evolved from early missiles he pays considerable attention to missile technology not as an end in itself but as a contributor to launch vehicle technology focusing especially on the engineering culture of the program hunley communicates this very human side of technological development by means of anecdotes character sketches and case studies of problems faced by rocket engineers he shows how such a highly adaptive approach enabled the evolution of a hugely complicated technology that was impressive but decidedly not rocket science unique in its single volume coverage of the evolution of launch vehicle technology from 1926 to 1991 this meticulously researched work will inform scholars and engineers interested in the history of technology and innovation as well as those specializing in the history of space flight
